

## CONSTRUCTION NOTICE

### Main Street Waterline Upgrade (Flood Avenue to Park Drive)

The Main Street waterline project between Berry Road and James Garner Avenue will enhance water pressure and firefighting capabilities and replace the aging water infrastructure. The new PVC waterline replaces an aged iron ductile that was originally installed over 40 years ago, and has recently experienced ruptures and leakages.

This work was added as an extension of the Berry Road Waterline project that was completed in March 2017 and resulted in cost savings on the streetscape project by utilizing contractors that were already working in the area. This

project is being completed in preparation for the ongoing reconstruction of Main Street pavement and the future construction of the Main Street Streetscape Project later this summer. Waterline construction on the Main Street Streetscape project located between James Garner Avenue and Park Drive was completed on May 17, 2017 at a cost of \$590,200. Waterline construction from Flood Avenue to Park Drive is expected to be complete by June 15, 2017 at an estimated cost of \$226,360; customer connections to the new waterline will be completed following bacteriological sampling.

Reconstruction of Main Street pavement between Flood and Park is being completed by the Public Works Department under a separate project.

### CONSTRUCTION TIME FRAME

May 2017 to June 2017 *(dates are projected as accurately as possible, but are subject to change).*

### PROJECT SUMMARY

The project includes:

- Installation of a new 16-inch water transmission line
- Reconnection of new waterline at adjoining side streets and businesses
- Reconstruction of pavement and sidewalks (excluding Main Street)

### PROJECT CONTACTS

Mark Daniels, Utilities Engineer  
Dept. of Utilities, City of Norman
